

PRODUCT:

- ST9 S/N 150-3036: SLB fluid end block
- UTEX Hard/Soft Combo Packing Part # 2108-23-0101-67
- UTEX Soft Packing Part # 2108-21-0101-68

MFR: ST9 Gas & Oil LLC

MODIFICATION:

- 1) Fluid end grease port moved to facilitate greasing of new packing style.
- 2) O-ring added to lantern ring on packing to seal.
- 3) FE block comes with (2) 3" flanges instead of (1) 2" flange and (1) 3" flange.

DETAILS: SLB currently uses oil to lubricate plunger packing instead of grease. Since oil is much thinner, an o-ring was added on the SLB style packing to improve packing bore sealing and eliminate oil leaking from packing nut threads (pic 1).

However, with this packing modification, the grease/oil port on the block itself was modified (pic 2).

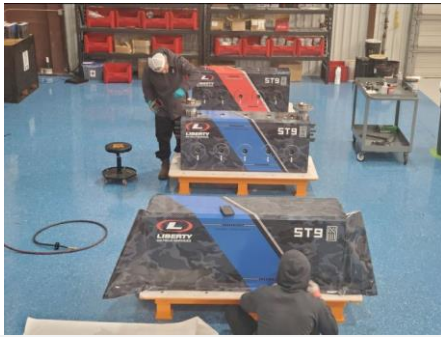

Besides these changes, the fluid ends are the same. All stickers and markings denoting seat size, BOM, packing information will remain. See pic 3 & 4 for comparison.
